

## **VOLO - Active Shooter Awareness Program (ASAP)**

### **“See Something - Say Something” TipCenter -**

Your faculty, staff, students and their families are the eyes and ears of your community. Give them the tools they need to share information safely and anonymously. With our multimedia #seesay technology, tips can be reported by calling or via a text message with pictures or even video directly into a single dedicated line. Tips can also be filed anonymously online.

### **Panic Buttons for all staff members -**

Arm your entire staff with the ability to trigger an emergency panic scenario with the click of a button. Scenarios can simultaneously alert the police, security, other staff, and anyone else via a variety of means including voice call, SMS text, push notification and email.

### **Emergency check-in/status updates -**

Monitor locations of faculty while on school property with geo-fenced location tracking. Allow teachers to send location pins for critical events and check in for additional assistance. Teachers can indicate whether they are safe or need help.

### **Desktop Pop-up Alerts -**

Allow every staff computer in the entire building to receive immediate pop-up alerts with detailed information and instructions during emergency situations.

### **Geo-Fence Location Privacy Settings -**

While it is imperative that first responders and school administrators can keep track of faculty members locations during an emergency, it is also important that the tracking terminate when employees leave work. To that end VOLO's geo-fenced perimeter map activates location monitoring only within the boundaries of school property.
