

**Nevada Early Intervention Services  
NRS 388.5195 Reporting for Calendar Year 2020**

Per the Nevada Revised Statute (NRS) 388.5195, on or before July 31 of each year, the Department of Education in collaboration with Aging and Disability Services Division shall publish a report containing aggregate data comparing the development of language and literacy skills in Nevada children who are less than 6 years old and who are deaf, hard of hearing, blind or visually impaired, including, without limitation children who are both deaf and blind with the development of such skills by children who do not have a disability.

These data are provided by the Nevada Aging and Disability Services Division, Nevada Early Intervention Services (EI). EI is a system of services and supports individually designed to help families meet the specific needs of their children. Comprehensive early intervention services are provided to families through state and community programs. EI programs provide services based on the regulations provided by Part C of the Individuals with Disabilities Act (IDEA).<sup>1</sup>

The children included in this report are ages 0-3 years old and received IDEA Part C services from EI during the reporting period of January 1, 2020, through December 31, 2020.

Eligibility assessment data were collected from EI state and community programs. Every child determined eligible for IDEA Part C services receives a developmental assessment. Areas of the developmental assessment relating to language and literacy are Communication, Cognition, and Social/Emotional. Development of language and literacy skills are compared using scores from these areas in which the child’s chronological age and assessed age are captured. Chronological age represents a child’s calculated age based on their date of birth, and assessed age is equivalent to the developmental age of the child.

<b>Table 1: Number of children based on CHRONOLOGICAL AGE (<i>in months</i>) at the time of the eligibility assessment who meet the criteria requirement of NRS 388.5195.</b>		
<b>Chronological Age Categories</b>	<b>Number of children in age group</b>	<b>Percent (%) of Total</b>
Less than 1 month	8	5%
1-11 Months	116	66%
12-23 Months	27	15%
24-35 Months	26	15%
Total	177	100%

**Nevada Early Intervention Services  
NRS 388.5195 Reporting for Calendar Year 2020**

The table below shows the number and percent of the 177 children grouped into chronological age categories who indicate a delay within a specific area of development. As children get older, the assessments used to determine delays become more complex and test additional skill sets.

**Table 2:** Number of children based on CHRONOLOGICAL AGE (*in months*) groups at the time of the eligibility assessment.

Area of Development	Chronological Age Categories in Months	Number of Children in age group	Number of Children with a delay	Percent (%) of Children with delay
Communication	Less than 1	8	0	0%
	1-11	116	95	82%
	12-23	27	27	100%
	24-35	26	26	100%
Cognition	Less than 1	8	0	0%
	1-11	116	87	75%
	12-23	27	27	100%
	24-35	26	25	96%
Social/Emotional	Less than 1	8	0	0%
	1-11	116	86	74%
	12-23	27	23	85%
	24-35	26	24	92%

The table below includes assessed age results aggregated by area of development. These results demonstrate the number and percent of the 177 children as their assessed age.

**Table 3:** Number of children based on ASSESSED AGE (*in months*) at the time of the eligibility assessment. \*

Area of Development	Assessed Age Categories in Months	Number of Children in age group	Percent (%) of Total
Communication	Less than 1	24	14%
	1-11	133	75%
	12-23	18	10%
	24-35	2	1%
Cognition	Less than 1	35	20%
	1-11	108	61%
	12-23	28	16%
	24-35	6	3%
Social/Emotional	Less than 1	36	20%
	1-11	106	60%
	12-23	32	18%
	24-35	3	2%

**Nevada Early Intervention Services  
NRS 388.5195 Reporting for Calendar Year 2020**

The average chronological age of the 177 children is 10 months of age. In the developmental area of communication, these 177 on average, were assessed at a developmental age of 5 months indicating a 50% delay in this developmental area. The average assessed age for those children within the area of cognition is 6 months which indicates a 40% delay in this developmental area. The average assessed age for those children within the area of social/emotional is 6 months of age indicating a 40% delay in this developmental area.

**Table 3: Average CHRONOLOGICAL AGE and ASSESSED AGE (in months) by developmental area. \***

<b>Area of Development</b>	<b>Average Chronological Age</b>	<b>Average Assessed Age</b>	<b>Average Percent (%) of Delay</b>
Communication	10	5	50%
Cognition	10	6	40%
Social/Emotional	10	6	40%

*\*Data Note: Any child with a chronological age and/or assessed age less than one (1) month, was rounded up to age one (1) to determine averages.*

*Important to Note: These data were self-reported by individual programs within the early intervention system following a template created by the Children’s Services Management Analyst Team at Aging and Disability Services Division. Data reflect a child’s scores, represented as age in months, from the developmental assessment used at the time of eligibility determination.*
