Examination of Assessment Models Used in Other States

When evaluating state assessment systems, it can be illustrative to examine how other states have structured their assessment systems. This information can inform the assessment tools that are being used as well as how states are using different assessment tools. Such information can also be helpful for identifying the states that have membership in different assessment consortia and may be able to share insights and best practices for assessment administration. Sharing this information can provide needed contextual information that supports decision-making for how to structure a state assessment system. To support the Nevada Department of Education in evaluating the state's assessment system, WestEd has compiled information on other states' assessment systems, including the general, alternate, and English language proficiency assessments administered. This includes both required and optional statewide assessments. This state scan also presents information on college readiness assessments, focusing on the states that administer the ACT or SAT in their assessment systems. Tables are presented to provide information on different states' assessment systems for comparison, and maps are included to present visualizations of state membership in different assessment consortia.

State K–12 General Assessments

This first section provides a high-level overview of state assessment systems, providing information on the assessments administered in core academic subjects (i.e., English language arts, mathematics, science, and social studies). For each state, information is presented to identify the assessments administered for each subject and the grades in which they are required. For state English language arts and mathematics assessments, membership in assessment consortia is noted; this information can also be found in the attached maps identifying Smarter Balanced Assessment Consortium (Smarter Balanced) and Partnership for Assessment of Readiness for College and Careers (PARCC) states. Currently, 15 states administer Smarter Balanced assessments and 7 states administer PARCC assessments.

Nevada is one of the 15 states that currently administers Smarter Balanced assessments, and one of the 22 states that administers a consortium assessment.

As part of this state assessment system overview, assessments administered in grades K–2 are also included. Currently, 24 states administer one or more early learning diagnostic assessment as part of their assessment system. Nevada is one of these 24 states. These assessments are administered to assess student readiness for kindergarten or to identify students' literacy skills. In some states, districts are allowed to select from a state-approved list of early learning assessments. Any early learning assessment administered as part of a statewide assessment system is listed in Table 1 below.

Some states elect to administer a college and career readiness assessment (e.g., ACT and/or SAT). States may require students to take the selected college and career readiness assessment or make the assessment available for districts to administer. Further information on state administration of a college and career readiness assessment can be found in Table 4, including identification of states that administer the ACT or SAT as the state high school assessment required for accountability purposes.

Information about states' assessment systems is derived from states' department of education websites.

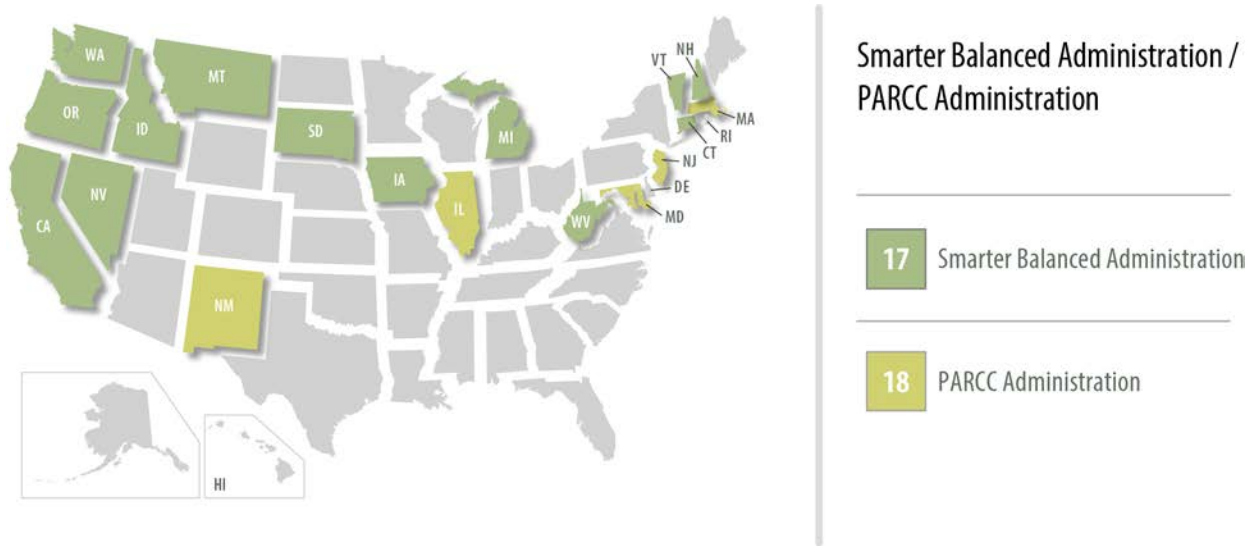

Figure 1. This map highlights the states that administer the Smarter Balanced and PARCC assessments in their assessment systems.

Details for state general education assessments (assessment name, grades administered, consortium membership, assessment purpose) can be found in Appendix A.

State K–12 Alternate Assessments

To facilitate all students participating in statewide assessments, states will include alternate assessments in their assessment systems. Alternate assessments are aligned with alternate content standards that set expectations for the knowledge and skills students with cognitive and physical disabilities will develop. These alternate assessments are administered as summative assessments for students with disabilities who are unable to take general statewide summative assessments. Table 2 identifies the different alternate assessments administered by states, with information on the subjects each is administered for and the grades each is administered in. Included in this table is information on any alternate early learning assessments that are administered by the state.

States may also elect to administer an alternate assessment from a consortium. These maps identify the states that administer the Dynamic Learning Maps (DLM) or the National Center and State Collaborative (NCSC) assessments. Currently, 17 states administer DLM assessments and 18 states administer NCSC assessments. Other states, including Nevada, administer state-developed alternate assessments.

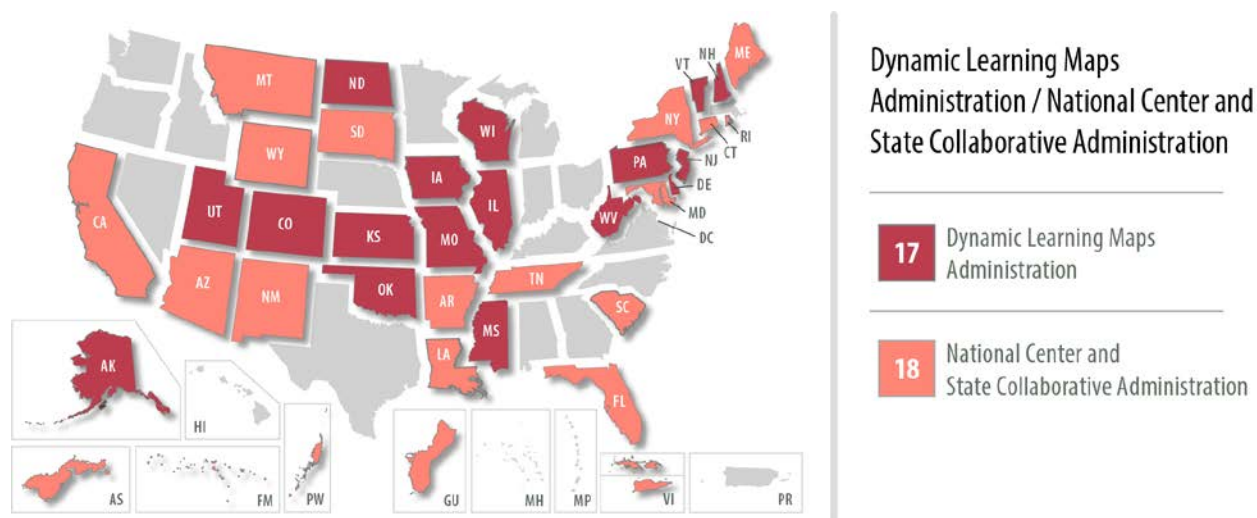

Figure 2. Highlighted here are the states that administer the DLM and NCSC assessments in their assessment systems.

Details for state alternate assessments (assessment name, grades administered, consortium membership) can be found in Appendix B.

State K–12 English Language Proficiency Assessments

To measure students' progression toward English fluency, states must administer assessments to gauge students' English language proficiency (ELP). These ELP assessments are critical for identifying students' English proficiency levels and progression toward English fluency. States administer ELP assessments to gauge students' reading, writing, speaking, and listening skills. Some states choose to administer an ELP consortium assessment. Currently, 10 states administer the English Language Proficiency Assessment for the 21st Century (ELPA21) assessment, and 35 states administer the WIDA ASSETS assessment. Other states administer a state-developed ELP assessment.

Nevada is one of the 35 states administering WIDA ASSETS as the state's English language proficiency assessment.

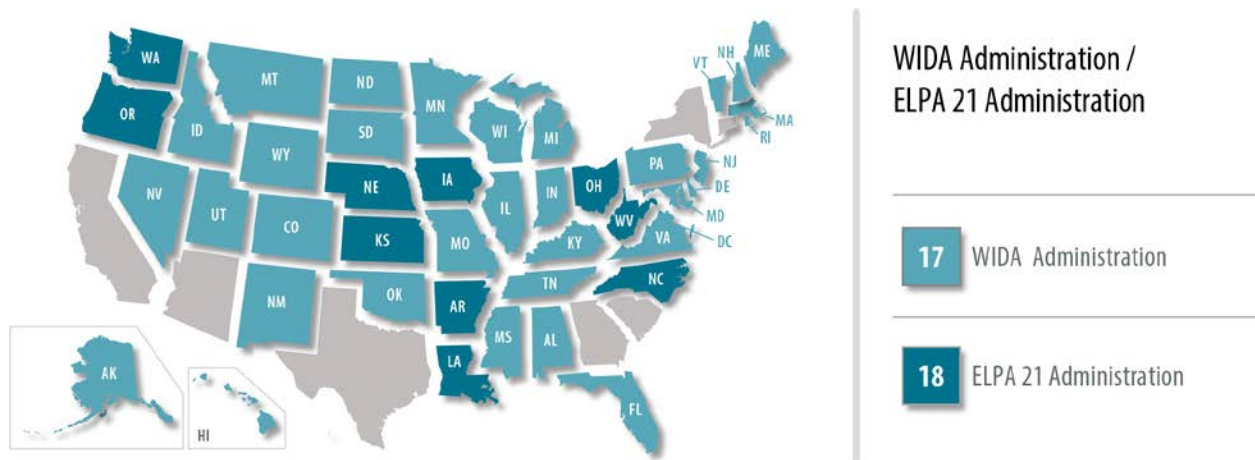

Figure 3. This map identifies the states that administer the ELPA21 and WIDA assessments as part of their assessment system.

Details for state English language proficiency assessments (assessment name, grades administered, consortium membership) can be found in Appendix C.

State Administration of ACT and SAT

With an increased state focus on students' college and career readiness, some states have begun to include college and career readiness assessments, like the ACT and SAT, in their assessment systems. A college and career readiness assessment might be administered to fulfill high school testing requirements. States may also make a college and career readiness assessment available for districts to make available to their students. Currently, 20 states have included ACT administration in their assessment systems. Two states (Hawaii and South Dakota) make the ACT available for districts who wish to administer the ACT to their students. Of these 20 states, 7 states administer the ACT as their state's high school assessment for accountability purposes. For the SAT, 11 states have included SAT administration in their assessment systems. Of these, 7 states administer the SAT as their state's high school assessment for accountability purposes.

Nevada is one of the 7 states that administers the ACT as the state's high school assessment for accountability purposes.

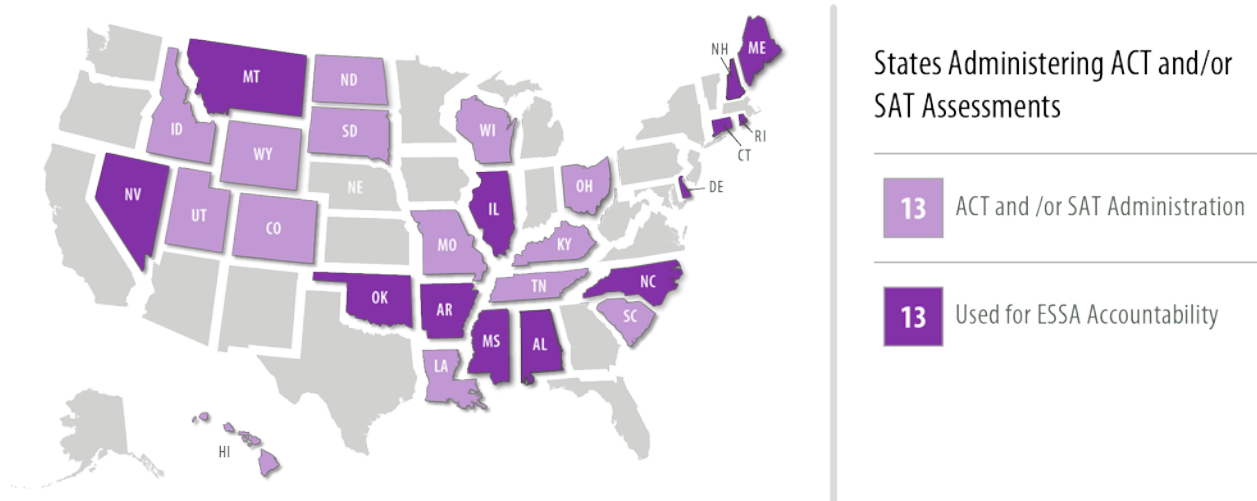

Figure 4. States that administer the ACT and/or SAT assessments as part of their assessment system are identified here. Also highlighted are the states that administer either ACT or SAT as their high school assessment for ESSA accountability requirements.

Details for state administration of ACT and SAT assessments, and whether either assessment is administered for accountability purposes, can be found in Appendix D.

State English Language Arts, Mathematics, and Science Content Standards

This section focuses on the content standards states use as part of their instructional systems. Content standards are a critical aspect that guide instruction and assessment practices. To better understand the content of states' subject assessments, it can be illustrative to examine the content standards different states are using to inform their assessment.

In terms of states' content standards for English language arts, mathematics, and science, some states have elected to adopt state-developed standards, while other states have adopted common standards. Currently, 35 states have adopted the Common Core English language arts standards and 34 states have adopted the Common Core mathematics standards (Minnesota uses the Common Core English language arts standards and state-developed mathematics standards). In terms of science, 21 states have adopted the Next Generation Science Standards (NGSS).

Nevada is one of the 34 states that has adopted Common Core standards in both English language arts and mathematics, and one of 21 states that has adopted the NGSS.

Information about states' content standards is derived from states' department of education websites.

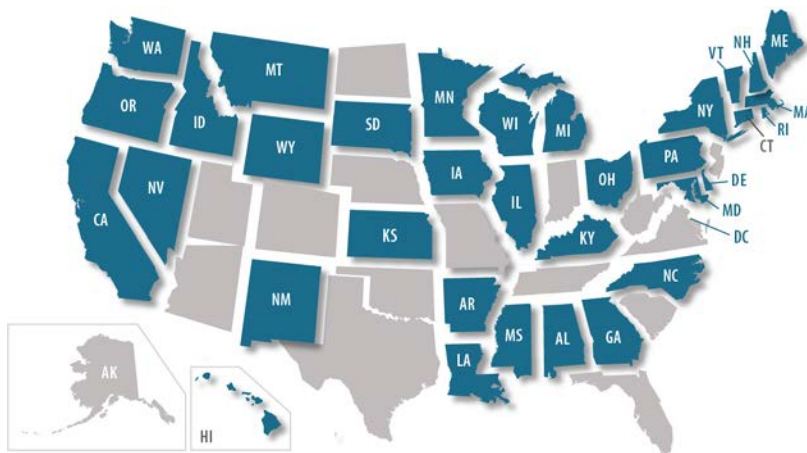

Figure 5. This map identifies the states that have adopted the Common Core State Standards in English language arts.

Figure 6. This map identifies the states that have adopted the Common Core State Standards in mathematics.

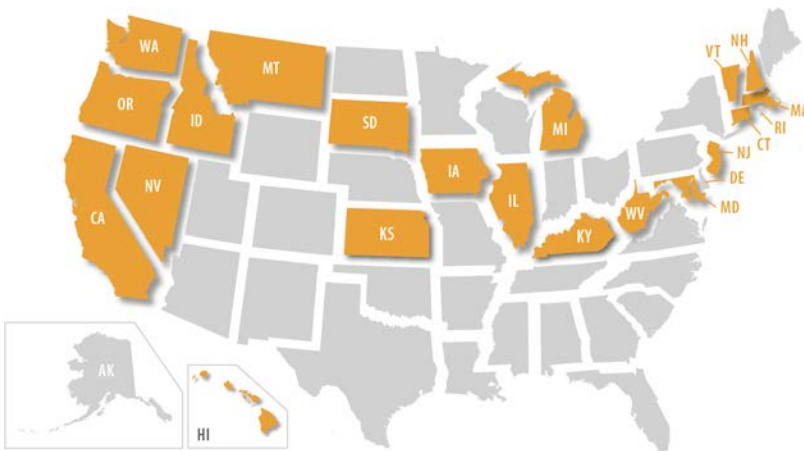

Figure 7. This map identifies the states that have adopted the Next Generation Science Standards.

Details for state content standards and consortium membership can be found in Appendix E.
